

Carbon Filters

H125, H151, H200, H300 Series

Activated carbon does an excellent job in reducing/removing tastes, odors and dissolved organic chemicals from water supplies including chlorine. Additional grades of carbon are available for specific contaminant applications. Activated carbon requires periodic backwashing of the filter bed.

Water quality parameters: water to be filtered should be free of oil, suspended matter and iron for maximum service life. Carbon filters can operate in wide range of pH levels.

¹Dimensions are typical, but subject to change without notice

²Allow additional 12" for media loading

³Available in top-mount or side-mount

- Service and backwash flow rates are based on 50°F incoming water temperature.
- Operating parameters - pressure range 40-100 PSI; temperature range 40°-110°F.
- Product improvement designs are subject to change without notice.

As a general rule - Lower flows produce higher quality water and a larger volume of treated water between backwashing.

Dechlorination:

R.O. Feed - 2 gpm/ft³ and assumes influent Cl₂ < 3 ppm and outlet Cl₂<0.1 ppm.
Influent turbidity < 5NTU.
Commercial (taste/odor) - 3 gpm/ft³
Organics: 1 gpm/ft³, TOC ≤ 5 ppm as O₂ consumed.
Influent turbidity < 5NTU

Consult Hellenbrand’s Engineering Department for additional sizes, modifications, steel tanks or special applications.
